

REGARDING: TRUCK EQUIPMENT – DRAG PRO 180Z AND TAIL LIGHT AND WORK LIGHT KIT ACCESSORIES

BOSS Snowplow is pleased to announce brand new additions to the Truck Equipment lineup, the **Drag Pro 180Z Rear plow** and **Drag Pro Tail Light and Work Light Accessory Kits**.

DRAG PRO 180Z

The Drag Pro 180Z is the most versatile rear-mounted plow system available, with multiple blade positions and the ability to plow forward and in reverse. Designed for ¾ and 1-ton trucks, the Drag Pro 180Z mounts from the rear using a universal fifth-wheel rail system and a receiver hitch, allowing you to pull snow from the back while clearing large areas like commercial parking lots. Rotating wings allow the operator to adjust quickly to various plowing situations and the two-point attachment system allows the operator to freely plow forward, in reverse, and in the Z position.

STANDARD FEATURES:

- 8' – 16' of coverage
- Independently operated wings offering 180 degrees of rotation
- Relief valve protection of wings when plowing forward or reverse
- Quick Hitch system allows operator to quickly attach and detach the plow
- UHMW Cutting Edge and Curb Guards provide superior scraping
- Dual rear-facing LED Lights

Removal of OEM tailgate and installation of aftermarket fifth-wheel Rail System is required. Rail system is not offered by BOSS

PART NUMBERS:

		MSRP
RPL24516	Blade Crate, Drag Pro 180Z	\$3,115.00
RPL24500	Plow Box, Drag Pro 180Z	\$5,800.00
MSC25010	Wiring Kit, Drag Pro 180Z	\$310.00
MSC21680*	Controller, Handheld, Drag Pro	\$275.00

Pricing is MSRP as of April 1, 2021

*The MSC21680 hand control has been configured to function with both the original Drag Pro and the Drag Pro 180Z. Users can select the appropriate programming mode by following instructions on back of controller housing.

DRAG PRO ACCESSORIES

As with all aftermarket equipment, it is the responsibility of both the manufacturer and vehicle up-fitter to ensure that the vehicle complies with federal and DOT regulations. BOSS has developed two accessories specific to the Drag Pro family to assist with visibility of the truck when the rear plow is attached. These items work with the original Drag Pro and the new Drag Pro 180Z.

TAIL LIGHT KIT

BOSS provides a factory recommended installation height for the Drag Pro rear plows. This recommendation ensures there is adequate visibility of the truck tail lights on most make/model vehicles when the rear plow is in the fully raised position. In the

event that the plow obstructs the tail lights and compliance is of concern, BOSS has developed the **MSC24680 Tail Light Kit** for the Drag Pro family. The kit includes a set of DOT approved auxiliary tail lights, wire harness, mounting bracket, and hardware. Mounting directly into the stake pockets of the truck bed, the lights connect directly to the standard 4-pin trailer plug on the truck. Overall, the kit offers a safe, reliable means of ensuring customers remain compliant while on the road.

PART NUMBER:	MSRP:
MSC24680 Kit – Tail Light, Drag Pro	\$198.90

WORK LIGHT KIT

For those customers simply looking to shed a little more light on their work space when plowing, BOSS also offers the optional **Work Light Kit**. The Work Light Kit includes auxiliary LED work lights, wire harness, mounting bracket and hardware. The Work Light Kit connects directly to the Drag Pro harness.

PART NUMBER:	MSRP:
MSC24670 Kit – Work Light, Drag Pro	\$198.90

The **Drag Pro 180Z** and both the **Tail Light** and **Work Light Kits** can be ordered during the 2021-2022 Pre-Season with availability expected in June. The Product Selector tool, Manuals and interactive drawings are in the process of being added to our online tools. Please visit the Technical Support pages of www.bosspow.com in the coming weeks for additional information.
